PEOPLE
People's Blockchain

LITEPAPER · V1.1

The blockchain where every user is a verified human.

Owned by people, not VCs.

Our mission: put a blockchain in the hands of ordinary people — no code, no crypto skills, no bots, no insiders.

1B	27%	0%	0
PPL, fixed supply	of every launched token to its community	of fees burned — all shared	VC or investor allocations

AT A GLANCE

A blockchain for ordinary people.

People is a public blockchain where anyone with a phone can launch a token, mint club cards or raise money for an idea — and where rewards go to real, verified humans.

1B

PPL total supply. Fixed. 0% inflation in years 1–4.

27%

of every launched token goes to that token's own community pool (10% at creation + unsold curve tokens).

0%

of network fees burned. Every fee is shared with the network's people.

Verified humans

Free check via Telegram phone or Human Passport. No check, no rewards.

Self-funded

Small anonymous team. No VC. No investor allocation. No private round.

Cosmos EVM

Public testnet `people_97401-1` · EVM chain id 97401.

01 · WHY PEOPLE

Crypto was built for insiders. We're building it for people.

Three things keep ordinary people out — and three rules built into People to fix them.

PROBLEM 01

Built for insiders

Most chains assume you can read code, manage seed phrases and spot scams alone.

ANSWER 01

For ordinary people

A phone or a browser is enough. Launch, mint or raise with a form, not code.

PROBLEM 02

Bots get the rewards

Airdrops and reward programs are farmed by scripts and fake accounts.

ANSWER 02

Verified humans

Rewards go only to accounts that passed a free human check. Sign-up alone earns 0.

PROBLEM 03

Launches favour whales

Private rounds and insider allocations mean the community arrives last.

ANSWER 03

27% to the community

Every launched token sends about 27% of its supply to its own community pool.

> “Built into the protocol, not promised in a post”: every standard token launch sends about 27% of its supply to that token's own community pool: 10% at creation plus the unsold bonding-curve tokens at migration. If a curve does not sell out within 180 days, anyone can finalize it and the unsold tokens go to the community pool. The PPL sale follows the same rule: it runs 180 days from opening, then unsold PPL goes to the community pool. It is never mixed with network fees.

02 · PRODUCT

Everything with a form. Nothing with code.

A phone or a browser is enough. Create a wallet in about 30 seconds and try every tool on the public testnet.

T

LIVE ON TESTNET

No-code tokens

Name, ticker, image, supply. The token goes live on its own bonding curve — the first trade sets the price. About 27% to its community pool; the creator's share vests over 180 days.

N

LIVE ON TESTNET

NFT club cards

Membership cards for a club, a café or a community — one per member, with an image you upload or generate.

F

LIVE ON TESTNET

Fundraising

Collect support with reviewed templates: escrow, vesting, token-weighted vote. Demand sets the price, not a private round.

AI

LIVE ON TESTNET

AI contracts

Describe a contract in plain words. It is assembled from OpenZeppelin templates; you see the result before you deploy.

A

IN PROGRESS

Community AI agents

Agents that work for the group: a multisig community wallet with spending limits, whitelists and an emergency freeze. Changes only by token vote; every action visible in the explorer.

> Everything above runs on the public testnet. Testnet tokens carry no value.

03 · TECHNOLOGY

Ethereum-compatible. Human-first.

People runs on Cosmos EVM: Solidity contracts and familiar 0x addresses on a Cosmos chain — with a human check on top.

APPS
Token launch · NFT cards · Fundraising · AI contracts · Agents

HUMAN LAYER
Telegram phone · Human Passport · one person, one account

SMART CONTRACTS
Solidity / EVM · OpenZeppelin templates

CHAIN
Cosmos EVM · people_97401-1 · validators

NETWORK PARAMETERS

Cosmos chain id	people_97401-1
EVM chain id	97401
Native coin	PPL (denom appl, 18 decimals)
Accounts	people1… / 0x…
Status	PUBLIC TESTNET

Validators run the network and are paid from the validator pool plus 30% of every fee. Testnet validators run for testing; public staking and validation open in a later stage.

VERIFICATION · ONE CHECK THAT YOU ARE A PERSON

LEVEL 0

Signed in

Google or email + wallet.

0 points

LEVEL 1 · TELEGRAM

Phone, once

Share your phone once in our Telegram bot. One number per founder. **50% of base points.**

LEVEL 2 · HUMAN PASSPORT

Human Passport

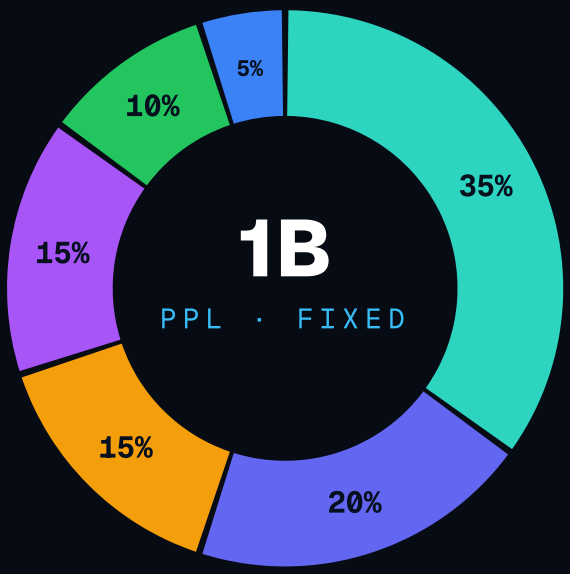

Verify with Human Passport. **100% of base points.**

Verification is free. No biometrics required. Without it there are no founder points on testnet and no personal PPL rewards on mainnet.

04 · TOKENOMICS

One billion PPL. No surprises.

Supply is fixed at genesis. Years 1–4: 0% inflation. From year 5, any new emission is capped at 2% a year — and only by community vote.

BUCKET	SHARE	PPL
Community & rewards	**35%**	350,000,000
Validators & staking	**20%**	200,000,000
Team & founders	**15%**	150,000,000
Ecosystem treasury (DAO)	**15%**	150,000,000
Community sale	**10%**	100,000,000
Liquidity	**5%**	50,000,000

TEAM & FOUNDERS VESTING

15% of supply. 0% at launch, 6-month cliff, then 18 months linear — fully vested at month 24.

WHAT'S NOT HERE

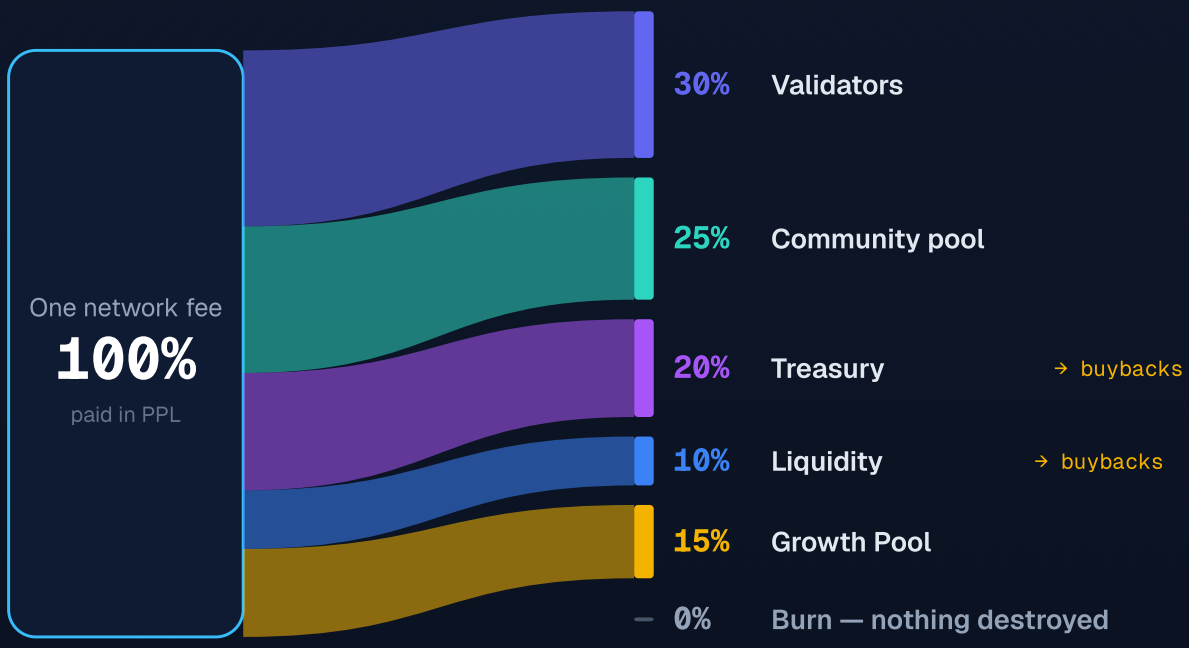

- **No investor bucket.** No VC, no private round, no strategic allocation.
- **No reward printing.** Founders, bounties, ambassadors and airdrops are paid only from the Community & rewards bucket.
- **No burn theatre.** 0% of fees are destroyed.

Preliminary — subject to community governance vote.

05 · FEES & BUYBACKS

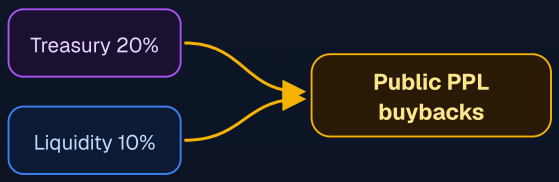

Where every fee goes.

Every protocol fee — including fractional fees — is split the same way, every time. Nothing is burned.

BUYBACK LOOP

Treasury + liquidity fund public PPL buybacks

The treasury (20%) and liquidity (10%) shares of network fees are used for public PPL buybacks.

TOKEN-LAUNCH FEE

Pay the way you prefer

USDC USDT PPL

Launch fees: **1 USD per token** and **2 USD per NFT**, payable in USDC/USDT or in PPL. The wallet always shows the exact fee before you sign.

> The 27% community share of a new token is separate from network fees and never mixed with them.

06 · MILLION FOUNDERS

Be one of the first million verified people.

Get a founder number. Invite friends. Earn points when **they** do real things on the network — not when they sign up.

01
Verify
Telegram phone or Human Passport.

02
Wallet
Google or email, a few taps.

03
Real action
Swap, pool, NFT mint, token launch or vote.

SIGN-UP ONLY
= 0
Likes, follows and empty accounts don't count.

HOW POINTS BECOME PPL

$$\text{PPL per point} = \frac{\text{season pool}}{\text{all points in the season}}$$

SEASON 1 POOL

6,000,000 PPL

Paid from the existing Million Founders pool. No new coins. When the pool is empty, the program stops.

FAIR BY DESIGN

- Two referral levels only
- Per-season cap on active invitees
- Invite points only after the invitee verifies and acts
- Points clawed back from bot accounts
- No new coins — paid from an existing pool

PAYOUT

Preliminary. Points, the PPL-per-point rate and the season budget may change before mainnet. Not a promise of income.

07 · HOW WE DIFFER

Different choices, on the record.

Only verifiable public facts about other networks, with sources. This compares design choices, not quality.

	ETHEREUM	SOLANA	PEOPLE
Fees burned	Base fee is burned[1]	50% of the base fee is burned[2]	**0% burned**
Who receives fees	Validators get the priority fee (tip)[1]	Validators get 50% of the base fee and 100% of the priority fee[2]	**Validators 30 · Community 25 · Treasury 20 · Liquidity 10 · Growth 15**
Early funding	Public ether sale, 2014 — 42 days, bought with BTC[3]	$20M Series A led by Multicoin Capital (2019); investors received SOL tokens[4]	**Self-funded. No VC, no investor allocation**
Accounts	Creating an account costs nothing; no identity check[5]	Human check is not a protocol requirement	**Rewards only for verified humans**
New-token community share	Not a protocol rule	Not a protocol rule	**≈ 27% of every launched token**

08 · ROADMAP

Gates, not dates.

Each stage starts when its gate is met. No dates are promised.

0

Season 0 · Public testnet

Wallets, verification, token launches, NFT cards, swaps, Million Founders points.

● Now

1

Mainnet + PPL sale

Mainnet launches. The PPL sale is not open yet; it opens only once an operating legal entity exists.

Gate: 1,000 verified people + live treasury multisig

2

Staking & validators

Staking and validator participation open beyond the project.

After mainnet

TEAM & FUNDING

Anonymous. Self-funded.

- A small team. We publish work, code and rules — not faces.
- No VC money. No investor allocations. No private round.
- Team share: 15%. 0% at launch, 6-month cliff, then 18 months linear (24 months total).
- There is no team line in the network fee split.

SECURITY

Checked before it counts.

- So far the code has had an **internal AI-assisted review**; an independent security audit will be done before mainnet.
- The treasury is controlled by People's own **2-of-3 multisig contract** on the People network, created before mainnet; signer addresses will be published.
- Sale, vesting and liquidity contract addresses will be published at mainnet launch.
- Bot defence: human check, device/IP limits, daily point caps, bot clawback.
- No-code contracts are assembled from OpenZeppelin templates.

09 · RISKS & DISCLAIMER

Straight answers.

Read this before you take part.

No promise of income

PPL, points and rewards are not an investment product. Nothing here promises profit, yield or returns. No activity, no rewards.

Prices can go to zero

Token prices can go up, down, or to zero.

Testnet is not mainnet

Testnet tokens and balances carry no value. Points are a record of activity, not a payout guarantee.

Everything is preliminary

Numbers, schedules and rules may change before mainnet and are subject to community governance.

Technology risk

Software can have bugs. An independent audit reduces risk; it does not remove it.

Regulation

Rules differ by country and may change.
